Drying Locker „KTS 2000“

Why heat an entire room in order to dry clothing when a heated locker requires only 1200 watts and dries more efficiently, more gently and at lower cost?

- SET UP
- PLUG IN
- READY FOR USE

The **KTS 2000** is a two-door drying locker and has been especially developed for hard-to-dry heavy-duty clothing and working-jackets. A rotary disc with 18 hooks is fixed to the ceiling of the locker, allowing for the easy hanging and removing of items of clothing. The locker has a depth of 75 cm and is fitted with a cylindrical lock. The revolving movement and simultaneous blowing of warm air into the entire locker, results in the efficient and gentle drying of all forms of protective clothing. The built-in 24h operation timer, the 6h clock timer and the on/off switch enable a selective drying period.

Technical details:

Electrical supply: 230 Volt V AC/ 50 Hz
Electrical consumption: 1200 Watt
Maintenance-free warm-air blower

Dimensions:

Width/Depth/Height 750/780/1950 (mm)
Weight: approx.. 140 kg
Standard colour: RAL 7035 light-grey
Construction: sheet steel, powder-coated
